Data Science

Model Workflow

GENERAL ASSEMBLY

Lesson roadmap

Welcome + Introduction

Model Workflow Review

Bring It Home

Learning objectives

1. Gather, clean, explore and model a dataset from scratch.
2. Evaluate several models.
3. Split data into testing and training sets using both train/test split and cross-validation and apply both techniques to score a model.

Model Workflow Review

Bring it together

You've learned many steps of the data analysis process. Today you'll bring it all together. Some of the steps include:

- ➔ Problem statement
- ➔ Gathering the data
- ➔ Data cleaning
- ➔ EDA
- ➔ Train/Test Split, K-Fold Cross Validation, Holdout Sets
- ➔ Model Building and Model Validation
- ➔ Model Interpretation and Communication

Model Workflow

Let's see it for ourselves!

- ☐ Build a model.
- ☐ Open **02-model-workflow.ipynb**

Bring It Home

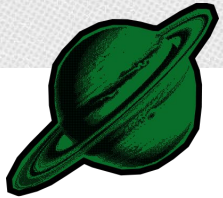
Key takeaways

Get to know your data

Everytime you encounter new data, take time to understand it deeply.

Model Building is Iterative

Try, learn, edit, repeat.



Use your metrics

Choose your metrics carefully to match the model and the problem statement.

DON’T FORGET:
